Clean Delaware Inspection Protocol

Dear Customer,

Thank you for requesting a class "H" septic inspection by Clean Delaware, LLC

Please fill out the form with as much information available to you as possible. It is important that the bottom of the form be signed or e-signed and returned with the \$600 payment to initiate the inspection process. We use the information from the form to locate and retrieve current permit information. This form is the first page of the report that we will finalize and submit to the state for their records. Failure to submit pertinent information may cause a delay in the inspection process.

Once we have received the signed form we will correspond with DNREC to obtain a current permit. Upon completion of both these steps we can then proceed with the inspection. The turn around time on an inspection is typically 5-7 business days. Your completed inspection will be faxed or mailed to the billing address you provide. You may call with questions regarding the process or results at (302)-684-4221 or email dan@cleandelaware.com

Please Note: If the home has been vacant for more than two weeks, we may be required to run a flow test. This test requires water is working and available at the site. If we need to supply our own water (approx. 200 gal) for this test, there will be an additional \$200 charge. If the system has a pump, float, or alarm, then the electric must be turned on to complete the inspection.

Attention Real Estate Agents: If you are a real estate agent submitting the request on behalf of the owner/buyer, please provide your agency name, email address, fax number, and contact number. You can also sign the form on behalf of your client. ****Note:** The person (s) signing the form will be personally responsible for payment. In addition, please provide the settlement date and name of the settlement attorney.

We look forward to providing you with a thorough and professional septic inspection.

Thank you,
Cory Desmond
